1 PROBLEM(GATE46)

Consider the random process

$$X(t) = U + Vt,$$

where U is a zero-mean Gaussian random variable and V is a random variable distributed between 0 and 2. Assume that U and V are statistically independent. The mean value of the random process at $t=2$ is.....

2 SOLUTION(GATE46)

Here U is a gaussian random variable of mean 0 and Let us consider V is uniformly distributed random variable in $(0, 2)$.

Random Variable	U	V	$X(t)$
Expected Value	0	1	t

$$E[X(t)]t = E[U + Vt] \quad (2.0.1)$$

$$E[X(t)] = E[U] + tE[V] \quad (2.0.2)$$

$$E[X(t)] = 0 + t \quad (2.0.3)$$

$$E[X(t)] = t \quad (2.0.4)$$

$$E[X(2)] = 2 \quad (2.0.5)$$

\therefore mean of random process $X(t)$ at 2 is 2.
